Kepada

Yth. Dekan Fakultas Sains dan Teknologi
UIN Sunan Kalijaga Yogyakarta
di Yogyakarta

Assalamu'alaikum wr. wb.

Setelah membaca, meneliti, memberikan petunjuk dan mengoreksi serta mengadakan perbaikan seperlunya, maka kami selaku pembimbing berpendapat bahwa skripsi Saudara:

Nama : Ridwan Wulida Siam

NIM : 14650024

Judul Skripsi : "IMPLEMENTASI ALGORITMA HUFFMAN DALAM KOMPRESI
DATA PADA DATABASE"

sudah dapat diajukan kembali kepada Program Studi Teknik Informatika Fakultas Sains dan Teknologi UIN Sunan Kalijaga Yogyakarta sebagai salah satu syarat untuk memperoleh gelar Sarjana Strata Satu dalam Program Studi Teknik Informatika.

Dengan ini kami mengharap agar skripsi/tugas akhir Saudara tersebut di atas dapat segera dimunaqsyahkan. Atas perhatiannya kami ucapkan terima kasih.

Wassalamu'alaikum wr. wb.

Yogyakarta, 24 April 2018

PERNYATAAN KEASLIAN SKRIPSI

SURAT KETERANGAN KEASLIAN SKRIPSI

Saya yang bertanda tangan dibawah ini:

Nama : Ridwan Wulida Siam

NIM : 14650024

Program Studi : Teknik Informatika

Fakultas : Sains dan Teknologi

Menyatakan bahwa skripsi saya yang berjudul **“Implementasi Algoritma Huffman Dalam Kompresi Data Pada Database”** merupakan hasil penelitian saya sendiri, tidak terdapat karya yang pernah diajukan untuk memperoleh gelar kesarjanaan di suatu perguruan tinggi, dan bukan plagiasi karya orang lain kecuali yang secara tertulis diacu dalam naskah ini dan disebutkan dalam daftar pustaka.

Yogyakarta, 23 April 2018

Yang menyatakan,

Ridwan Wulida Siam

NIM. 14650024

KATA PENGANTAR

Alhamdulillah, puji syukur kehadiran Allah SWT, yang telah melimpahkan rahmat, hidayah serta karunia-Nya, sehingga penyusun dapat menyelesaikan Penelitian dengan judul **“Implementasi Algoritma Huffman Dalam Kompresi Data Pada Database”**. Shalawat serta salam semoga selalu tercurahkan kepada uswatun hasanah kita, Nabi Muhammad SAW beserta keluarga, para sahabat dan pengikutnya termasuk kita semua yang senantiasa menantikan syafa'atnya kelak di Hari Akhir.

Penyusun menyadari bahwa penyusunan laporan penelitian ini tidak akan berjalan lancar tanpa dukungan dari berbagai pihak. Oleh karena itu, penyusun mengucapkan terima kasih banyak kepada:

1. Prof. Drs. Yudian Wahyudi, MA, Ph.D, selaku Rektor UIN Sunan Kalijaga Yogyakarta.
2. Dr. Murtono, M.Si selaku Dekan Fakultas Sains dan Teknologi UIN Sunan Kalijaga Yogyakarta.
3. Dr. Bambang Sugiantoro, MT. selaku Ketua Program Studi Teknik Informatika UIN Sunan Kalijaga Yogyakarta sekaligus pembimbing akademik.
4. Bapak Muhammad Didik Rohmad Wahyudi, S.T., MT. selaku pembimbing tugas akhir, yang telah memberikan banyak sekali bantuan saran, nasehat, yang sangat bermanfaat dan juga telah mengarahkan saya selama ini.

5. Bapak Sumarsono, S.T., M.KOM. selaku pembimbing akademik, yang telah memberikan banyak sekali bantuan saran, nasehat, yang sangat bermanfaat dan juga telah mengarahkan saya selama ini.
6. Para dosen Teknik Informatika yang saya hormati yang telah memberikan banyak ilmunya, tidak hanya ilmu pengetahuan tapi juga pengalaman dan nasehat yang sangat berguna, kepada saya selama perkuliahan.
7. Kepada teman-teman seperjuangan saya, Mahasiswa Teknik Informatika 2014 yang telah menemani saya berproses selama ini, dan telah memberikan banyak sekali pelajaran berharga pada saya.
8. Kepada semua teman-teman di ITTC UIN Sunan Kalijaga Yogyakarta, yang sudah banyak membantu dalam proses penelitian ini.
9. Serta kepada semua pihak yang tidak bisa saya sebutkan satu persatu, yang sudah membantu keberlangsungan penelitian ini secara langsung maupun tidak langsung.

Penulis menyadari masih banyak sekali kekurangan dan kelemahan dalam penelitian ini. Oleh karena itu, segala kritik dan saran senantiasa penulis harapkan dari pembaca. Akhir kata, semoga penelitian ini dapat bermanfaat bagi dunia pendidikan dan segala pihak, terutama bagi penulis sendiri.

Yogyakarta, 24 April 2018

Penulis

HALAMAN PERSEMBAHAN

Dengan rasa syukur yang teramat besar, penulis persembahkan tugas akhir ini kepada:

1. Yang pertama saya persembahkan kepada kedua orang tua saya Bapak Drs. Sujarwanto dan Alm Ibu Purwanti yang telah mendidik dan membesarkan saya hingga saya dapat menyelesaikan tugas akhirnya dan menjadi pribadi yang lebih baik lagi.
2. Kepada kedua saudara perempuan saya mbak Adani dan Ginaris yang telah memberikan dukungan secara tidak langsung termasuk dukungan dalam bentuk semangat.
3. Kepada Om Koni dan Buatik sekeluarga yang telah memberikan fasilitas yang nyaman untuk tinggal di jogja selama berkuliah.
4. Kepada Sahabat saya Ireicca telah memberikan dukungan semangat dan lainnya.
5. Kepada Iqbal dan Hafiez teman main bareng mobile legend yang membantu merefresh pikiran jika menang
6. Kepada teman seperjuangan teknik informatika angkatan 2014 dan teman-teman ITTC

IMPLEMENTASI ALGORITMA HUFFMAN DALAM KOMPRESI DATA PADA DATABASE

RIDWAN WULIDA SIAM

14650024

INTISARI

Perkembangan teknologi semakin hari semakin cepat dan banyak, mengakibatkan banyaknya data digital yang tersimpan dalam sebuah media penyimpanan. Terlebih jika data tersebut harus disimpan dalam waktu yang tidak ditentukan. Sehingga besarnya media penyimpanan yang dibutuhkan untuk menampung data tersebut. Salah satu cara untuk menyelesaikannya adalah dengan memampatkan data tersebut hingga ukurannya menjadi lebih kecil. Algoritma huffman adalah salah satu algoritma kompresi data teks terbaik.

Namun dalam algoritma huffman ini terdapat beberapa kelemahan antara lain dalam pembentukan pohon. Dalam penelitian ini menawarkan konsep algoritma huffman dengan dua buah pohon. Yang artinya dapat memangkas setengah dari pembentukan satu pohon huffman. Dengan menggunakan dua buah pohon huffman dalam pembentukan pohon terutama kode prefik akan menjadi lebih pendek.

Tentunya dalam penerapan kompresi data huffman ini dalam sebuah program akan memakan memori dan waktu yang lebih besar karena adanya proses tambahan sebelum data tersebut disimpan ataupun ditampilkan.

Kata kunci : Algoritma Huffman, Kompresi, Dekompresi, Pohon Huffman

IMPLEMENTATION OF HUFFMAN ALGORITHM FOR DATA COMPRESSION ON DATABASE

RIDWAN WULIDA SIAM

14650024

ABSTRACT

Technological developments are getting faster and faster, resulting in a lot of digital data stored in a storage medium. Especially if the data is then stored in an unspecified time. So the amount of storage media needed to accommodate the data. One way to solve it is to compress the data until its size becomes smaller. The huffman algorithm is one of the best text data compression algorithms.

But in this huffman algorithm there are several weaknesses, among others, in the formation of trees. In this study offers the concept of huffman algorithm with two pieces of trees. Which means it can cut half of the formation of a huffman tree. By using two huffman trees in the formation of trees especially the prefix code will become shorter.

Of course, in the application of huffman data compression in a program will take up more memory and time due to additional processes before the data is stored or displayed.

Keywords: Huffman Algorithm, Compression, Decompress, Huffman Tree

BAB I

PENDAHULUAN

1.1 Latar Belakang

Dewasa ini, perkembangan teknologi informasi dan komunikasi sangat cepat dan pesat. Teknologi informasi dan komunikasi sudah menjadi bagian penting dan mempengaruhi kehidupan di beberapa bidang. Banyak kemudahan yang diberikan, salah satunya kemudahan dalam penulisan dan penyimpanan data dokumen dalam bentuk digital. Dengan kemudahan yang ada, tidak berbanding lurus terhadap media penyimpanan dokumen digital tersebut karena pesatnya pertumbuhan terhadap data dokumen yang semakin hari semakin besar. Sedangkan dalam media penyimpanan yang ada saat ini masih sangat terbatas. Sebagai contoh kasus saja pada portal berita online yang tiap harinya rata-rata bertambah lebih dari 40 berita untuk satu kategori. Bayangkan saja jika sebuah portal berita memiliki lima kategori berita, maka setiap harinya mereka harus menyimpan setidaknya 200 berita belum ditambah jika pada saat itu sedang terjadi kasus atau kejadian besar misalkan saja terjadi bencana alam disuatu daerah atau pada moment tertentu contohnya saat ada pemilihan kepala daerah pastinya update berita pada portal berita tersebut makin besar lebih dari 40 berita.

Kompresi data adalah sebuah cara untuk memadatkan data sehingga hanya memerlukan ruang penyimpanan lebih kecil sehingga lebih efisien dalam penyimpanan atau dapat mempersingkat waktu pertukaran data tersebut. Salah satu algoritma untuk kompresi data yang paling terkenal

adalah algoritma huffman. Algoritma huffman adalah yang konsepnya mengurangi redundansi pada data yang ada dengan membentuk binari. Dengan melakukan kompresi data diharapkan data dokumen akan memiliki ukuran yang lebih kecil sehingga dapat menghemat media penyimpanan. Namun algoritma kompresi data huffman dengan membentuk langsung sebuah pohon huffman akan menimbulkan besarnya lebar dan dalamnya level dalam pohon tersebut sehingga perlu sebuah solusi untuk mengurangi kedalaman dan lebar pohon huffman tersebut untuk penentuan kode prefik di setiap karakternya.

1.2 Rumusan Masalah

Berdasarkan penjelasan latar belakang diatas, maka rumusan masalah yang akan di bahas adalah

1. Bagaimana melakukan implementasi algoritma Huffman untuk kompresi dan dekompresi data dengan menggunakan dua buah pohon huffman?
2. Mengetahui sejauh mana hasil dari algoritma huffman dengan menggunakan dua buah pohon huffman dari segi penyimpanan dan performa yang dihasilkan?

1.3 Tujuan

Tujuan yang ingin dicapai dari penelitian ini adalah :

1. Mengetahui penerapan algoritma Huffman untuk kompresi dan dekompresi data dengan menggunakan dua buah pohon huffman.

2. Mengetahui performa algoritma kompresi data huffman dengan menggunakan dua buah pohon huffman dibandingkan dengan satu pohon huffman.
3. Mengetahui dampak apa saja yang dihasilkan dalam penerapan algoritma kompresi tersebut dalam portal berita online dari segi penyimpanan data dan performa.

1.4 Batasan Masalah

Agar penelitian lebih terarah dan tidak menyimpang dari rumusan masalah yang ada, maka batasan masalah dari penelitian ini adalah :

1. Algoritma yang digunakan untuk proses kompresi dan dekompresi adalah algoritma Huffman.
2. Data yang akan diproses adalah bertipe karakter abjad (a-z) dan spasi.
3. Menghitung rasio hasil kompresi dan performa waktu dan memori.
4. Database yang digunakan adalah MYSQL.

1.5 Manfaat

Manfaat yang diharapkan dari penelitian ini adalah dapat mengetahui seberapa efisien kompresi data menggunakan algoritma Huffman dengan menggunakan dua buah pohon huffman dalam kasus portal berita online. Diharapkan juga dapat menyediakan aplikasi yang dapat diterapkan pada website sehingga dapat menghemat penyimpanan terhadap data dari website tersebut. Terlebih pada website yang memiliki penyimpanan terbatas atau kecil.

BAB V

PENUTUP

5.1 Kesimpulan

Dari proses implementasi dan pengujian terhadap algoritma huffman pada penelitian ini dapat ditarik kesimpulan sebagai berikut

1. Pembentukan 2 pohon huffman pada proses awal adalah proses yang sangat penting dan sangat memengaruhi hasil dari kompresi data. Semakin data latih merepresentasikan data yang akan dikompresi maka hasil dari proses kompresi akan memiliki ukuran file yang lebih kecil.
2. Rasio kompresi algoritma huffman dengan 2 pohon huffman dan dengan 1 pohon dapat mencapai $\geq 39,75\%$ dilihat dari hasil pengujian yang telah dilakukan.
3. Algoritma huffman dengan menggunakan 2 pohon menghasilkan rasio kompresi lebih besar dari pada algoritma huffman dengan 1 pohon saja jika data yang digunakan banyak atau besar.
4. Algoritma huffman dengan 2 pohon juga memiliki waktu eksekusi lebih cepat dalam menyimpan maupun membaca 1 data, tetapi memiliki waktu lebih lama dalam membaca banyak data.
5. Algoritma huffman dengan 2 pohon dan 1 pohon ini membutuhkan waktu proses yang tidak terlalu jauh berbeda untuk proses kompresi lalu menyimpan data, namun dalam segi memori yang dibutuhkan lebih besar daripada tidak menggunakan algoritma huffman.

6. Dalam proses membaca data berkebalikan dengan proses menyimpan data, waktu proses yang dibutuhkan lebih lama tetapi memakan memori yang lebih sedikit.
7. Dengan menggunakan algoritma huffman ini keamanan data pada penyimpanan lebih terjaga karena hasil kompresi tidak bisa secara langsung dibaca oleh manusia atau komputer tanpa melalui proses dekompresi terlebih dahulu.

5.2 Saran

Dalam proses penelitian ini masih terdapat banyak kekurangan, oleh karena itu penulis memberikan saran untuk penelitian selanjutnya, sebagai berikut:

1. Dapat diimplementasikan pada data lain selain teks, seperti gambar, audio, dan video sehingga lebih teruji konsep algoritma huffman dengan menggunakan 2 pohon huffman.
2. Dalam pembentukan pohon huffman karakter lain dapat menjadi pertimbangan selanjutnya.
3. Memadukan dengan algoritma lain seperti pembelajaran mesin.
