Kepada

Yth. Dekan Fakultas Sains dan Teknologi

UIN Sunan Kalijaga Yogyakarta

di Yogyakarta

Assalamu'alaikum wr. wb.

Setelah membaca, meneliti, memberikan petunjuk dan mengoreksi serta mengadakan perbaikan seperlunya, maka kami selaku pembimbing berpendapat bahwa skripsi Saudara:

Nama : Muthiah Lutfia Khansa

NIM : 08690077

Judul Skripsi : Analisis Kualitas Butir Soal Ulangan Fisika Kelas X Semester Genap Tahun Pelajaran 2011/2012 dengan Program *Quest* di SMAN 1 Bawang dan MAN Banjarnegara

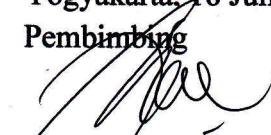

sudah dapat diajukan kembali kepada Program Studi Pendidikan Fisika Fakultas Sains dan Teknologi UIN Sunan Kalijaga Yogyakarta sebagai salah satu syarat untuk memperoleh gelar Sarjana Strata Satu dalam Pendidikan Fisika

Dengan ini kami mengharap agar skripsi/tugas akhir Saudara tersebut di atas dapat segera dimunaqasyahkan. Atas perhatiannya kami ucapan terima kasih.

Wassalamu'alaikum wr. wb.

Yogyakarta, 18 Juli 2013

SURAT PERNYATAAN KEASLIAN SKRIPSI

Saya yang bertanda tangan di bawah ini

Nama : Muthiah Lutfia Khansa
Nim : 08690077
Program Studi : Pendidikan Fisika
Fakultas : Sains dan Teknologi

menyatakan bahwa skripsi yang berjudul:

Analisis Kualitas Butir Soal Ulangan Fisika Semester Genap Tahun Pelajaran 2011/2012 dengan Program *Quest* di SMAN 1 Bawang dan MAN Banjarnegara.

merupakan hasil penelitian saya sendiri. Adapun bagian-bagian tertentu dalam penulisan skripsi ini yang saya kutip dari karya orang lain telah dituliskan sumbernya secara jelas sesuai dengan norma, kaidah dan etika penulisan ilmiah.

Yogyakarta, 19 Juli 2013

Penyusun.

HALAMAN MOTTO

“Allah tidak mengabulkan doa dari hati yang lengah dan ragu”

(Muhammad SAW)

“Maka, nikmat Tuhanmu yang manakah yang kamu dustakan?”

(Q.S Ar Rahman)

HALAMAN PERSEMPAHAN

Alhamdulillah Rabbil 'Alamin..

Puji syukur kehadirat Allah SWT karena rahmatNya lah kado kecil untuk orang tua ini dapat terselesaikan, selain itu penulis ingin mempersembahkan karya ini untuk:

Ayah dan Ibu tercinta Mulyanto,S.H dan Dra.Mutmainah Sri Nuryati

Mas Ahmad Hanif Ruseno, Mbak Sofi Nuria Melati, Ahmad Zulfikri Riza

Terimakasih untuk cinta yang tak pernah habis, kasih yang tak pernah pamrih, doa yang tak pernah putus, dan semua kesabaran serta keikhlasannya menanti saya sarjana.

Andi Zainul Albaab, *Terimakasih selalu menjadi yang terdepan membantu saya dalam hal apapun.*

Keluarga Besar Homeschooling Kak Seto Yogyakarta

Sahabat-sahabat saya:

Nurul 'Aini, Aftina Nurul Fajriyati, Nina Isnaeni,

Arum Widyarini, Yuli Fatmawati, Syaiful R Hakim,

dan seluruh rekan-rekan prodi Pendidikan Fisika 08 yang tidak dapat disebutkan satu persatu.

Terimakasih atas semua dukungan, semangat, dan kebersamaannya.

Serta...

Almamaterku tercinta,

Program Studi Pendidikan Fisika

Fakultas Sains dan Teknologi

UIN Sunan Kalijaga Yogyakarta

KATA PENGANTAR

Alhamdulillahirobbil 'alamin, segala puji bagi Allah SWT yang telah memberikan taufik dan hidayah-Nya sehingga penyusun dapat menyelesaikan skripsi berjudul “Analisis Kualitas Butir Soal Ulangan Fisika Kelas X Semester Genap dengan Program *Quest* Tahun Pelajaran 2011/2012 di Kabupaten Banjarnegara”. Shalawat dan salam tercurahkan kepada Nabi Agung Muhammad SAW yang kelak akan memberi syafaat kepada para pengikutnya. Amin.

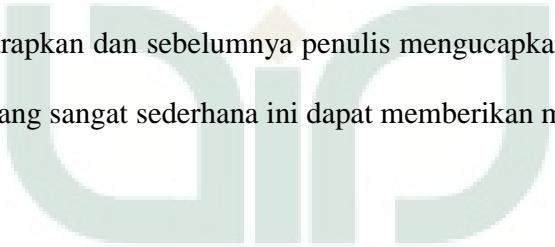

Terselesainya penulisan skripsi ini tentunya tidak terlepas dari bantuan dan dukungan berbagai pihak. Oleh karena itu, diucapkan terima kasih kepada:

1. Ayah dan Ibu sebagai motivator dan fasilitator terhebat bagi penulis.
2. Prof. Drs. H. Akh. Minhaji, M.A., Ph.D selaku Dekan Fakultas Sains dan Teknologi Universitas Islam Negeri Sunan Kalijaga.
3. Joko Purwanto, M.Sc selaku ketua Program Studi Pendidikan Fisika Universitas Islam Negeri Sunan Kalijaga sekaligus Dosen Pembimbing yang telah memberikan bantuan, bimbingan, dan semangat dengan penuh kesabaran.
4. Drs. Murtono, M.Si selaku Dosen Penasihat Akademik yang telah mengarahkan penyusun dalam menempuh perkuliahan.
5. Drs. Slamet, MT., sebagai ahli yang sudah meluangkan waktu dan memberikan banyak masukan dalam penyelesaian skripsi ini.
6. Lili Maenani,S.Pd., Jamal Sarwana,S.Pd., Budi Hayati,S.Pd., Fahmi Latifah,S.Pd., Ismunnisa Nadhifah,S.Pd, Nina Isnaeni,S.Pd, selaku reviewer

ahli yang sudah meluangkan waktu dan memberikan masukan dalam penyelesaian skripsi ini.

7. Cahyo.,S.Pd., Lili Maenani.,S.Pd., Suparti.,S.Pd selaku guru fisika di SMAN 1 Bawang, MAN 1 dan 2 Banjarnegara yang telah berkenan memberikan kesempatan, bantuan dan dukungan selama penyusun melaksanakan penelitian.
8. Keluarga besar Pendidikan Fisika. Dosen-dosen yang telah mentransfer ilmunya serta teman-teman Pendidikan Fisika angkatan 2008, yang merupakan inspirasi dan semangat bagi penyusun.
9. Semua pihak yang membantu penulisan skripsi ini yang tidak dapat penulis sebutkan satu-persatu.

Penulis menyadari dengan segenap kerendahan hati skripsi ini masih banyak kekurangan bahkan jauh dari kesempurnaan. Maka saran dan kritik yang konstruktif sangat penulis harapkan dan sebelumnya penulis mengucapkan terima kasih. Mudah-mudahan karya yang sangat sederhana ini dapat memberikan manfaat. Amin..

**ANALISIS KUALITAS BUTIR SOAL ULANGAN SEMESTER GENAP FISIKA
KELAS X TAHUN PELAJARAN 2011/2012 DENGAN PROGRAM QUEST DI
KABUPATEN BANJARNEGARA**

Oleh
Muthiah Lutfia Khansa
08690077

ABSTRAK

Penelitian ini bertujuan untuk mengetahui kualitas butir soal ulangan semester genap fisika kelas X tahun pelajaran 2011/2012 di SMAN 1 Bawang dan MAN Banjarnegara secara kualitatif dan kuantitatif. Analisis kualitatif dilihat dari Aspek materi, konstruksi, bahasa/budaya, sedangkan analisis kuantitatif dilakukan dengan bantuan program *Quest* sehingga mendapatkan hasil menurut pendekatan teori klasik dan teori respon butir.

Penelitian ini menggunakan pendekatan *descriptive documentary analysis*. Objek penelitian ini adalah respon jawaban siswa pada ulangan umum semester genap fisika kelas X tahun pelajaran 2011/2012 di SMAN 1 Bawang yang berjumlah 207 lembar dan di MAN Banjarnegara sebanyak 621 lembar. Pengambilan sampel dilakukan secara *proportional random sampling* dengan taraf kesalahan 5%. Analisis kualitatif dengan menggunakan tabel telaah aspek materi, konstruksi, bahasa/budaya Departemen Pendidikan Nasional. Analisis kuantitatif menggunakan variabel utama berupa kualitas tes, sub variabel dengan pendekatan teori tes klasik berupa reliabilitas, tingkat kesukaran, daya pembeda, dan efektifitas distraktor, sub variabel dengan pendekatan teori respon butir berupa tingkat kesukaran, dan kecocokan butir dengan model *Rasch*.

Hasil penelitian menunjukkan (1) Kualitas tes secara kualitatif berdasarkan aspek materi, konstruksi, bahasa/budaya pada soal ulangan fisika semester genap yang digunakan di SMAN 1 Bawang berkualitas kurang baik, dan soal yang digunakan di MAN Banjarnegara juga berkualitas kurang baik. (2) Kualitas tes secara kuantitatif dengan pendekatan teori tes klasik menunjukkan bahwa soal ulangan semester genap yang digunakan di SMAN 1 Bawang berkualitas kurang baik, sedangkan soal yang digunakan di MAN Banjarnegara berkualitas baik. Kualitas tes secara kuantitatif dengan pendekatan teori respon butir menunjukkan soal ulangan semester genap yang digunakan di SMAN 1 Bawang berkualitas sangat baik, sedangkan pada soal yang digunakan di MAN Banjarnegara berkualitas baik.

Kata Kunci : Analisis Butir Soal, Ulangan Semester Genap Fisika, Program *Quest*.

BAB I

PENDAHULUAN

A. Latar Belakang

Pendidikan merupakan pilar utama dalam pembentukan kualitas sumber daya manusia di Indonesia. Pendidikan sebagai investasi jangka panjang bagi masa depan harus mampu membekali peserta didik agar dapat meningkatkan daya saing. Pendidikan harus dititikberatkan pada pendidikan yang bermutu baik dari segi masukan, proses, maupun hasil pendidikannya. Sumber daya manusia yang berkualitas hanya akan muncul dari pendidikan yang juga berkualitas, sehingga perlu terus menerus dilakukan perbaikan khususnya pada sistem evaluasi. Sistem evaluasi sangat penting dalam menentukan tercapai tidaknya tujuan pendidikan nasional.

Evaluasi pendidikan berdasar Undang-undang tentang Sistem pendidikan Nasional nomor 14 Tahun 2005 mempunyai makna kegiatan pengendalian, penjaminan dan penetapan mutu pendidikan terhadap berbagai komponen pendidikan pada setiap jalur, jenjang dan jenis pendidikan sebagai bentuk pertanggungjawaban terhadap penyelenggara pendidikan. Salah satu komponen pendidikan yang perlu dievaluasi adalah hasil belajar peserta didik. Melalui evaluasi hasil belajar dapat diketahui seberapa jauh peserta didik telah menguasai materi yang dipelajari sehingga menjadi umpan balik bagi perbaikan proses belajar-mengajar di kelas.

Evaluasi berkaitan dengan kegiatan mengukur dan menilai. Mengukur adalah membandingkan sesuatu dengan satu ukuran, sedangkan menilai adalah mengambil suatu keputusan terhadap sesuatu dengan ukuran baik atau buruk. Untuk dapat melakukan evaluasi dengan tepat, diperlukan alat ukur yang baik, valid, dan reliabel. Pada umumnya alat ukur yang digunakan berupa perangkat tes, baik tes obyektif maupun uraian. Agar tidak terjadi peserta tes dianggap gagal karena butir soal sulit dipahami dan tingkat validitas serta reliabilitasnya rendah maka harus dilakukan analisis butir soal terhadap perangkat tes. Analisis butir soal memiliki beberapa manfaat diantaranya adalah (1) mendukung penulisan butir yang efektif, (2) secara materi dapat memperbaiki tes yang digunakan, (3) meningkatkan validitas dan reliabilitas soal (Anastasia dan Urbina, 1997:172). Lebih lanjut Linn dan Grondlund (1995: 316-318) menyatakan bahwa kegunaan analisis butir soal bukan hanya terbatas untuk peningkatan butir soal, tetapi ada beberapa hal yaitu bermanfaat sebagai dasar: (1) diskusi kelas efisien tentang hasil tes, (2) untuk kerja remedial, (3) untuk peningkatan secara umum pembelajaran di kelas, dan (4) untuk peningkatan ketrampilan pada konstruksi tes.

Perangkat tes diklasifikasikan dalam 4 jenis yaitu tes formatif, sumatif, penempatan dan diagnostik. Tes sumatif mencakup diantaranya ujian akhir dan ujian akhir semester. Dari hasil survei, soal ulangan semester di Kabupaten Banjarnegara disusun oleh tim KKM (Kelompok Kerja Madrasah) untuk seluruh Madrasah Aliyah di Wilayah karesidenan Banyumas, dan

MGMP (Musyawarah Guru Mata Pelajaran) untuk seluruh SMA/SMK di Wilayah Kabupaten Banjarnegara.

Berdasarkan observasi awal dan wawancara dengan guru fisika kelas X di SMAN 1 Bawang Banjarnegara, meskipun terdapat tim MGMP namun setiap sekolah menyusun soal sendiri. Demikian halnya dengan guru mata pelajaran fisika SMAN 1 Banjarnegara juga menyusun soal sendiri disesuaikan dengan kondisi siswa. Soal ulangan semester di SMAN 1 Banjarnegara menggunakan bahasa inggris sebab SMAN 1 Banjarnegara merupakan rintisan sekolah bertaraf internasional dan memiliki tim MGMP intra sekolah. Demikian juga dengan sekolah menengah atas yang lain, seluruhnya telah menggunakan soal buatan guru mata pelajaran fisika.

Berbeda dengan dua sekolah tersebut, berdasarkan wawancara dengan guru mata pelajaran fisika di MAN 2 Banjarnegara diketahui bahwa untuk seluruh Madrasah Aliyah di wilayah Karesidenan Banyumas menggunakan soal ulangan semester genap atau ulangan kenaikan kelas yang disusun oleh Tim KKM se-karesidenan tersebut. Menurut guru fisika dari MAN 1 Banjarnegara, meskipun termasuk tim KKM tetapi faktor wilayah karesidenan yang luas menyebabkan sekolah seluruh tidak mungkin mengikuti rapat KKM untuk pembuatan soal ulangan semester tersebut. Oleh karena itu perlu diketahui bagaimana kualitas dari soal yang diujikan tersebut.

Kualitas butir soal dapat ditinjau dari segi kualitatif dan kuantitatif. Berdasarkan wawancara dengan guru fisika di beberapa sekolah di Banjarnegara diperoleh informasi bahwa soal ulangan semester tidak ditelaah

terlebih dahulu secara kualitatif. Telaah kualitatif terdiri dari segi materi, konstruksi, bahasa/budaya dan telaah aspek kognitif taksonomi bloom yang direvisi Anderson dan Krathwol. Anderson dan Krathwol menyatakan bahwa kemampuan dalam aspek kognitif meliputi kemampuan mengingat (C1), memahami (C2), menerapkan (C3), menganalisis (C4), menilai (C5), dan menciptakan (C6).

Analisis butir soal secara kuantitatif merupakan karakteristik empiris butir tersebut. Terdapat dua dasar pemikiran dalam teori pengukuran untuk menganalisis butir soal secara kuantitatif. Metode analisis tersebut dikembangkan berdasar teori tes klasik (*classical test theory*) dan teori respon butir (*item response theory*). Berdasarkan wawancara, telaah kuantitatif dilakukan hanya dengan pendekatan teori klasik. Teori klasik merupakan dasar pengembangan analisis yang sederhana dan mudah dalam penerapannya, namun memiliki kelemahan, diantaranya: (1) Hasil estimasi parameter tergantung pada karakteristik peserta ujian (*group independent*) . Hal ini berimplikasi pada tingkat kesukaran soal akan menjadi rendah ketika tes diujikan pada kelompok berkemampuan tinggi, dan sebaliknya jika tes diujikan pada peserta dengan kemampuan rendah, maka tingkat kesukaran tes akan menjadi tinggi. (2) Hasil estimasi kemampuan peserta tergantung pada karakteristik butir soal (*item independent*) (Saifudin Azwar, 2008:26). Mengatasi kelemahan dalam teori tes klasik dikembangkan teori respon butir dengan asumsi kebebasan butir dan sampel (*sample free*). Teori respon butir (IRT) merupakan salah satu cara untuk menilai kelayakan butir dengan

membandingkan rerata penampilan butir terhadap tampilan bukti kemampuan yang diramalkan oleh model (Hambleton & Swaminathan 1985: 15). Tujuan utama teori respon butir dikembangkan adalah untuk mengatasi kelemahan teori tes klasik yang tidak independen terhadap sampel. Teori respon butir menekankan pada probabilitas jawaban benar peserta tes, parameter butir dan parameter peserta tes dihubungkan melalui suatu fungsi matematik atau model formula matematis. Dalam formula ini kemungkinan peserta tes menjawab soal dipahami sebagai fungsi logistik perbedaan parameter yang dimasukkan ke dalam model.

Terdapat beberapa model pengukuran dalam *Item Response Theory (IRT)*. Model pengukuran tersebut dibedakan berdasar jumlah parameter butir yang dimasukkan ke dalam model, yaitu model satu parameter (1P) atau model *Rasch*, dua parameter (2P), dan tiga parameter (3P). Analisis butir soal dapat dilakukan dengan bantuan program komputer. Beberapa diantaranya adalah *Rascal*, *Ascal*, *Quest*, *Bigstep*, *Bical*, *Bilog*, dan *Conquest* untuk teori respon butir, serta *Iteman* dan *Anatest* untuk teori klasik.

Program *Quest* adalah program komputer untuk analisis butir soal yang mampu memberikan analisis kuesioner komprehensif dengan menyediakan analisis data dengan mengarah pada model logistik satu parameter (L-IP) atau yang dikenal sebagai model *Rasch*. Program *Quest* meliputi suatu bahasa kontrol yang mudah digunakan dengan *output* yang informatif dan fleksibel. *Quest* dapat digunakan untuk mengkonstruksi dan memvalidasi variabel data dikotomi (Raymond J. Adams & Seik-Toon Khoo,

1996;1). Selain itu program *Quest* juga dapat melakukan analisis butir soal dengan pendekatan teori klasik.

Berdasarkan permasalahan yang diuraikan, peneliti memandang penting untuk melakukan analisis kualitas soal baik secara kualitatif maupun kuantitatif untuk mengetahui kualitas perangkat tes fisika sehingga dapat digunakan sebagai acuan perbaikan soal di masa mendatang. Penelitian ini menggunakan sampel dari Madrasah Aliyah Negeri 1 dan 2, serta Sekolah Menengah Atas Negeri 1 Bawang.

B. Identifikasi Masalah

Berdasarkan latar belakang permasalahan yang diuraikan diatas maka dapat diidentifikasi beberapa permasalahan :

1. Analisis butir soal secara kualitatif terhadap soal ulangan fisika semester genap di Kabupaten Banjarnegara belum dilakukan.
2. Analisis butir soal secara kuantitatif terhadap soal ulangan fisika semester genap dengan pendekatan teori respon butir belum dilakukan.
3. Program *Quest* masih jarang digunakan dalam menganalisis butir soal.

C. Batasan Masalah

Berdasarkan identifikasi masalah diatas, dengan mempertimbangkan kemampuan peneliti dan luasnya permasalahan maka penelitian dibatasi pada:

1. Soal yang dianalisis adalah soal ulangan fisika kelas X semester genap tahun pelajaran 2011/2012 yang digunakan di SMAN 1 Bawang Banjarnegara dan MAN Banjarnegara.
2. Analisis kualitatif dibatasi pada aspek materi, konstruksi, bahasa/budaya.
3. Analisis kuantitatif dibatasi pada analisis menurut pendekatan teori klasik dan teori respon butir pada soal pilihan ganda.

D. Rumusan Masalah

Berdasarkan latar belakang masalah yang dikemukakan di atas, permasalahan yang akan diungkap dalam penelitian ini adalah:

1. Bagaimanakah kualitas butir soal ulangan fisika kelas X semester genap tahun pelajaran 2011/2012 yang digunakan di SMAN 1 Bawang dan MAN Banjarnegara jika dianalisis secara kualitatif?
2. Bagaimanakah kualitas butir soal ulangan fisika kelas X semester genap tahun pelajaran 2011/2012 yang digunakan di SMAN 1 Bawang dan MAN Banjarnegara jika dianalisis secara kuantitatif dengan program *Quest?*

E. Tujuan Penelitian

Tujuan dari penelitian ini adalah untuk mengetahui:

1. Kualitas butir soal ulangan fisika kelas X semester genap tahun pelajaran 2011/2012 yang digunakan di SMAN 1 Bawang dan MAN Banjarnegara jika dianalisis secara kualitatif.
2. Kualitas butir soal ulangan fisika kelas X semester genap tahun pelajaran 2011/2012 yang digunakan di SMAN 1 Bawang dan MAN Banjarnegara jika dianalisis secara kuantitatif dengan program *Quest*.

F. Manfaat Penelitian

Hasil penelitian ini diharapkan memiliki manfaat sebagai berikut

Manfaat Teoritis:

1. Hasil penelitian ini dapat dijadikan sumber referensi bagi peneliti lain untuk melakukan penelitian sejenis atau melanjutkan secara lebih luas dan intensif.
2. Memberikan sumbangan teoritik dalam ranah pengujian alat ukur menggunakan teori tes klasik dan teori respon butir.

Manfaat Praktis

1. Menjadi masukan bagi Dinas Pendidikan maupun Departemen Agama di Kabupaten Banjarnegara sebagai bahan untuk menentukan kebijakan dan langkah-langkah yang dipandang efektif di bidang pendidikan.
2. Bagi tim penyusun soal, hasil penelitian ini dapat digunakan sebagai bahan pertimbangan dalam pembuatan soal di masa mendatang.

BAB V

PENUTUP

A. Kesimpulan

Berdasarkan hasil penelitian dan pembahasan dapat disimpulkan bahwa:

1. Kualitas tes secara kualitatif berdasarkan aspek materi, konstruksi, bahasa/budaya pada soal ulangan fisika semester genap yang digunakan di SMAN 1 Bawang berkualitas kurang baik, dan soal yang digunakan di MAN Banjarnegara juga berkualitas kurang baik.
2. Kualitas tes secara kuantitatif dengan pendekatan teori tes klasik menunjukkan bahwa soal ulangan semester genap yang digunakan di SMAN 1 Bawang berkualitas kurang baik, sedangkan soal yang digunakan di MAN Banjarnegara berkualitas baik. Kualitas tes secara kuantitatif dengan pendekatan teori respon butir menunjukkan bahwa soal ulangan semester genap yang digunakan di SMAN 1 Bawang berkualitas sangat baik, sedangkan pada soal yang digunakan di MAN Banjarnegara berkualitas baik.

B. Saran

1. Pada penelitian selanjutnya, jumlah sekolah dari 3 sekolah yaitu SMAN 1 Bawang dan MAN 1 & 2 Banjarnegara dapat diperluas menjadi seluruh SMA dan MA di Kabupaten Banjarnegara.

2. Untuk penelitian lebih lanjut dapat digunakan *software* yang mampu menampilkan kurva karakteristik butir secara langsung.
3. Perlu diadakan perbaikan terhadap soal-soal penyusun tes. Antara lain dalam perbaikan kisi-kisi soal, dan pilihan jawaban yang tersedia.
4. Soal berkualitas baik dapat digunakan kembali, soal berkualitas kurang baik dapat digunakan kembali setelah direvisi, dan soal yang tidak baik sebaiknya tidak digunakan kembali.

KISI KISI SOAL ULANGAN FISIKA SEMESTER GENAP SMAN 1 BAWANG

1. Menentukan sifat lensa
2. Menentukan sifat bayangan pada lensa cembung
3. Menghitung perbesaran anguler lup
4. Menentukan daya lensa
5. Pembentukan bayangan pada mata manusia
6. Menentukan bagian dan fungsi mata
7. Menentukan jenis cacat mata
8. Menentukan sifat bayangan pada mikroskop
9. Menentukan perbesaran total mikroskop
10. Menentukan perbesaran total teropong
11. Menentukan nilai yang setara dari satu joule
12. Menentukan persamaan pertambahan luasan
13. Meghitung panjang logam akhir akibat pemanasan
14. Menghitung kalor yang dibutuhkan untuk berubah wujud dan menaikkan suhu
15. Menentukan volume gas pada tekanan tetap
16. Menentukan hubungan kalor didih dengan perubahan wujud
17. Menentukan definisi kalor jenis
18. Menentukan jenis perpindahan kalor
19. Menghitung suhu pada sambungan logam
20. Menentukan massa jenis
21. Menghitung kalor yang dipancarkan benda
22. Menentukan konsep arus listrik
23. Menghitung muatan yang mengalir melalui kawat
24. Menghitung hambatan jenis logam.
25. Menentukan hambatan pengganti resistor
26. Menghitung hambatan pengganti resistor
27. Menentukan besar hambatan dari lampu pijar
28. Menghitung energi listrik
29. Menghitung energi listrik yang digunakan lampu
30. Menentukan nilai yang setara dengan 1 watt.
31. Menentukan besar arus pada amperemeter.
32. Menentukan besar arus pada rangkaian yang bercabang

33. Menentukan panjang gelombang terkecil pada spektrum cahaya tampak
34. Menentukan cepat rambat gelombang elektromagnetik
35. Menentukan sifat gelombang elektromagnetik
36. Menentukan urutan spektrum gelombang elektromagnetik.
37. Menentukan panjang gelombang pada spektrum gelombang elektromagnetik
38. Menentukan spektrum gelombang elektromagnetik
39. Menghitung frekuensi gelombang
40. Menentukan jarak dengan radar.

5. Mata dapat melihat sebuah benda apabila terbentuk bayangan....
- a. sejati tegak diretina
 - b. sejati terbalik di retina
 - c. maya tegak diretina
 - d. maya terbalik di retina
 - e. maya tegak di lensa
6. Bagian dari mata yang berfungsi mengatur intensitas cahaya yang masuk adalah
- a. aqueous humor
 - b. iris
 - c. retina
 - d. pupil ✓
 - e. otot siliar
7. Cacat mata tidak dapat melihat benda dekat dengan jelas sebagaimana mata Normal disebut....
- a. hypermetrop ✓
 - b. miopi
 - c. presbiopi
 - d. astigmatisme
 - e. glaukoma
8. Dalam sebuah mikroskop, bayangan yang dibentuk oleh lensa obyektif adalah.....
- a. nyata , tegak , diperbesar
 - b. nyata , terbalik , diperbesar
 - c. nyata , terbalik , diperkecil
 - d. maya , tegak ,diperbesar
 - e. maya , tegak diperkecil
9. Jarak focus lensa obyektif dan okuler sebuah mikroskop adalah 1 cm dan 6,25 cm. Seorang Emetrop (bermata normal) menggunakan mikroskop untuk mengamati mikroorganisme yang diletakkan di depan lensa oyektif pada jarak 1,1 cm. Tentukan perbesaran total yang dihasilkan jika pengamat mengamati dengan mata berakomodasi maksimum :
- a. 50 kali ✓
 - b. 45 kali
 - c. 40 kali
 - d. 35 kali
 - e. 30 kali
10. Sebuah teropong bintang memiliki lensa obyektif dengan jarak focus 150 cm dan lensa Okuler dengan jarak focus 10,0 cm.. Teropong digunakan untuk melihat benda-benda Langit yang sangat jauh . Tentukan perbesaran teropong untuk mata normal
- a. 17
 - b. 16
 - c. 15 ✓
 - d. 16
 - e. 17
11. Satu joule setara dengan....
- a. 0,44 kalori
 - b. 0,34 kalori
 - c. 0,24 kalori ✓
 - d. 0,14 kalori
 - e. 0,04 kalori
12. Panjang akhir akibat pemanasan adalah
- a. $L = L_0 (1 + \alpha \Delta T)$ ✓
 - b. $L = L_0 \alpha \Delta T$
 - c. $L = L_0 (1 + \Delta T)$
 - d. $L = L_0 \Delta T$
 - e. $L = L_0 2 \alpha \Delta T$

LEMBAR SOAL

MATA PELAJARAN : FISIKA
KELAS : X

HARI/TGL : Senin, 11 Juni 2012
WAKTU : 07.30 – 09.30

- Perhatian :
- Semua jawaban dikerjakan dilembar jawaban yang tersedia
 - Nomor dan Nama siswa ditulis pada sudut kanan atas lembar jawaban
 - Gunakan waktu yang tersedia dengan sebaik-baiknya

Pilihlah jawaban yang paling tepat diantara a, b, c, d atau e yang sesuai dengan pernyataan sebelumnya dari tiap nomor dengan cara memberi tanda silang (X) pada kolom lembar jawaban yang tersedia.

- Sifat bayangan yang dibentuk oleh lensa cekung dari sebuah benda yang terletak antara titik fokus dan titik pusat kelengkungan adalah.....
a. Nyata, tegak , diperkecil
b. Nyata, tegak, diperbesar
c. Maya, tegak, diperkecil
d. Maya, tegak, diperbesar
e. Nyata, terbalik, diperkecil
- Sebuah benda bercahaya diletakan pada jarak 15 cm dari sebuah lensa negative dengan jarak focus 10 cm. Bayangan yang dihasilkan adalah....
a. terbalik, diperkecil
b. terbalik, diperbesar
c. tegak, sama besar
d. tegak, diperkecil
e. tegak, diperbesar!
- Cacat mata tidak dapat melihat dengan jelas benda dijauh tak terhingga disebut.....
a. Miopi
b. Presbiopi
c. Hipermetropi
d. Astigmatisme
e. Mata tua
- Perbesaran anguler dari lup yang memiliki jarak focus 5cm oleh pengamat bermata normal adalah.....
a. 4 sampai 5
b. 5 sampai 6
c. 5 sampai 7,5
d. 7,5 sampai 10
e. 8 sampai 10
- Sebuah mikroskop memiliki jarak focus okuler dan objektif masing -masing 2,5 cm dan 0,9 cm. Mikroskop tersebut digunakan oleh orang bermata normal tanpa berakomodasi dan menghasilkan perbesaran 90 kali. Jarak benda ke lensa objektif adalah.....cm
a. 0,1
b. 0,5
c. 1
d. 1,2
e. 1,5
- Sebuah mikroskop mempunyai jarak focus objektif dan okuler berturut-turut 8mm dan 60 mm. Jika preparat ditempatkan 10 mm didepan lensa objektif dan mata pengamat tanpa berakomodasi maka panjang tabung mikroskop tersebutmm
a. 40
b. 60
c. 78
d. 100
e. 150
- Seseorang melihat bintang dengan teropong menghasilkan perbesaran anguler 10 kali. Jika jarak focus lensa objektifnya 50 cm, maka jarak antara lensa objektif dan okulernya adalah....cm
a. 55
b. 60
c. 70
d. 100
e. 150
- Sebuah teropong bintang dipakai untuk mengamati bintang dilangit. Jika jarak lensa objektif dengan okuler 50 cm, dan jarak fokus lensa objektif 45 cm maka perbesaran total teropong adalah.....
a. 2 kali
b. 4 kali
c. 6 kali
d. 7 kali
e. 9 kali
- Suatu benda diukur dengan thermometer celcius menunjukan suhu 25°C . Suhu benda tersebut jika diukur dengan thermometer Reamur $^{\circ}\text{C}$
a. 5
b. 10
c. 16
d. 20
e. 36
- Pada suhu 0°C luas pelat baja tipis 2 m^2 setelah dipanaskan sampai suhu 80°C pertambahan luasnya adalah m^2
a. $2,20 \cdot 10^{-5}$
b. $2,24 \cdot 10^{-4}$
c. $1,76 \cdot 10^{-4}$
d. $4,40 \cdot 10^{-3}$
e. $3,52 \cdot 10^{-3}$
- Hubungan antara koefisien muai panjang,koefisien muai luas, dan koefisien muai volum yang benar adalah.....
a. $\alpha = \beta$
b. $\beta = 2\alpha$

- c. $\gamma = 3\beta$
d. $\alpha = 1/2\gamma$
e. $\beta = 1/3\alpha$

12. Suatu ruangan yang volumenya 10 liter berisi gas hidrogen dengan tekanan 2 atm. Jika gas tersebut dimampatkan dengan tekanan 5 atm pada suhu tetap maka volume gas menjadi.....liter

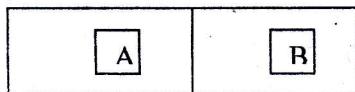

- a. 4
b. 5
c. 7
d. 12
e. 17

13. Perubahan – perubahan wujud zat yang memerlukan kalor adalah....
a. melebur dan membeku
b. membeku dan menguap
c. melebur dan mengembun
d. mendidih dan melebur
e. membeku dan mengembun

14. 300 g air yang suhunya 20°C dicampur dengan 100 g air mendidih maka suhu akhir campuran $^{\circ}\text{C}$
a. 25
b. 30
c. 40
d. 60
e. 80

15. 20 g air panas pada suhu 75°C dicampurkan dengan X gram air dingin yang suhunya 5°C . Agar diperoleh suhu campur 61°C maka nilai X adalah gram
a. 5
b. 6
c. 8
d. 10
e. 12

16. Dua buah logam A dan B mempunyai ukuran sama salah satu ujungnya disambung satu sama lain seperti gambar berikut

210°C 30°C

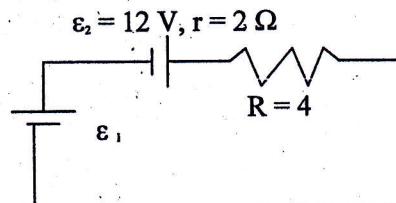

Jika koefisien konduksi logam A dua kali koefisien konduksi logam B , maka suhu sambungan logam tersebut adalah..... $^{\circ}\text{C}$

- a. 80
b. 100
c. 150
d. 165
e. 180

17. Dalam sebuah kawat pengantar mengalir elektron sebanyak $6,4 \text{ C}$ melalui penampang kawat dalam waktu 0,8 sekron. Besarnya arus listrik pada kawat pengantar tersebut adalah.... A
a. 4
b. 7,2
c. 8
d. 10
e. 12,4

18. Persamaan berikut yang benar berdasarkan hukum Ohm adalah....
a. $V = I/R$
b. $I = V \cdot R$
c. $V = I \cdot R$
d. $R = I/V$
e. $I = R/V$

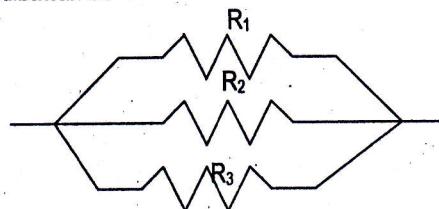

19. Perhatikan rangkaian listrik satu loop dibawah

Jika $\epsilon_1 = \epsilon_2$, maka besarnya arus yang mengalir pada rangkaian adalah.....

- a. 2 A
b. 3 A
c. 6 A
d. 8 A
e. 10 A

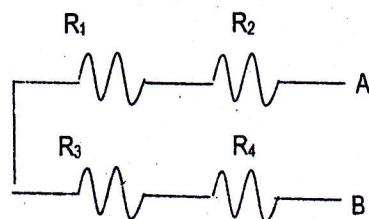

20. Tiga buah hambatan listrik di rangkaian seperti gambar dibawah ini

Jika R_1, R_2 dan R_3 berturut-turut $3 \Omega, 8 \Omega$, dan 6Ω , maka hambatan pengganti dari rangkaian diatas adalah.....

- a. 17Ω
b. $3/17 \Omega$
c. $24/15 \Omega$
d. $15 / 24 \Omega$
e. 20Ω

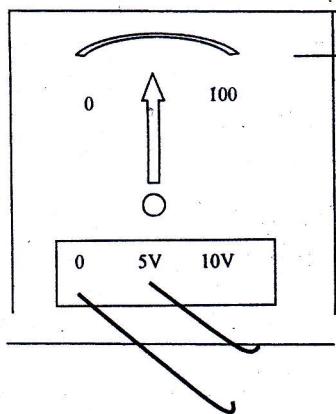

21. Perhatikan gambar rangkaian hambatan berikut :

Jika $R_1 = R_2 = 5 \Omega$ dan $R_3 = 3 \Omega, R_4 = 6 \Omega$, maka besarnya hambatan pengganti rangkaian diatas adalah Ω

- a. 19
b. 20
c. 21
d. 30
e. 33

22. Perhatikan gambar dibawah ini !

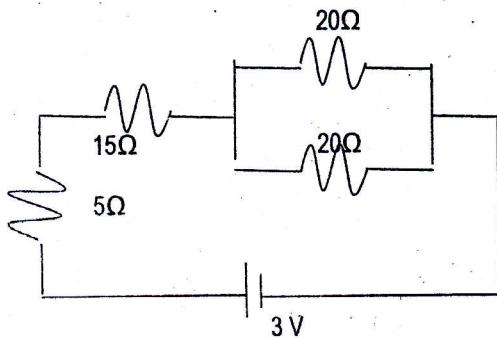

Hasil pengukuran tegangan diatas adalah.....

- a. 1 V
b. 2,5 V
c. 5 V
d. 10 V
e. 15 V
23. Agar sebuah elektron dapat berpindah diantara dua titik yang berbeda potensial 60 volt dibutuhkan energi sebesar joule ($1e = -1,6 \times 10^{-19}$)
a. 8×10^{-18}
b. 5×10^{-18}
c. 8×10^{-19}
d. 6×10^{-19}
e. 5×10^{-19}

24. Hambatan sebuah lampu pijar yang tertulis 44 W, 220 V adalah kΩ

- a. 1,8
b. 1,4
c. 1,2
d. 1,1
e. 1,0

25. Perhatikan rangkaian berikut !

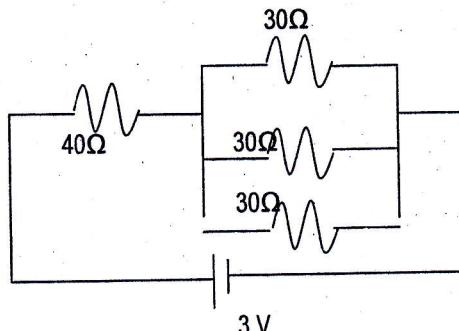

Banyaknya energi listrik yang dipakai rangkaian selama setengah jam adalah joule

- a. 620
b. 540
c. 460
d. 320
e. 240

26. Sebuah peralatan listrik yang bertuliskan 120 V ; 2400 W apabila diberi tegangan 120 V akan menarik arus sebesar.....A

- a. 0,02
b. 0,2
c. 2
d. 10
e. 20

27. Perhatikan gambar rangkaian berikut !

Daya listrik yang diserap oleh salah satu hambatan 30 Ω adalah watt

- a. 0,1
b. 0,2
c. 0,3
d. 0,4
e. 0,5

28. Sebuah lampu bertuliskan 200V, 10W disusun seri dan dinyalakan pada tegangan 100 volt. Daya yang terserap oleh lampu itu adalah watt
a. 0,8
b. 0,65
c. 0,5
d. 0,25
e. 0,1

29. Jika harga beli tenaga listrik dari PLN Rp 75, per KWH maka biaya yang dipakai untuk mengoperasikan sebuah mesin kulkas 150 watt terus menerus selama satu bulan (30 hari) berkisar pada harga Rp ...

- a. 8.100
b. 9.500
c. 10.800
d. 21.600
e. 27.000

30. Diantara spektrum cahaya tampak, yang memiliki panjang gelombang terkecil adalah ...

- a. merah
b. kuning
c. hijau
d. biru
e. ungu

31. Sinar X dimanfaatkan dalam bidang kedokteran untuk ...

- a. memotret tulang
b. membunuh sel kanker
c. menelusuri reaksi biokimia tubuh
d. mendeteksi kekurangan jodium
e. menghilangkan sementara refleks saraf

32. Urutan spektrum gelombang elektromagnetik dari panjang gelombang terbesar ke panjang gelombang terkecil adalah ...

- a. gelombang radio, cahaya tampak, sinar X, sinar gamma
 b. sinar gamma, sinar X, gelombang radio, cahaya tampak
 c. gelombang radio, sinar X, sinar gamma, cahaya tampak
 d. sinar gamma, gelombang radio, sinar X, cahaya tampak
 e. sinar gama, sinar X, cahaya tampak, gelombang radio
33. Gelombang elektromagnetik yang digunakan pada teknologi radar adalah ...
 a. gelombang radio
 b. gelombang mikro
 c. sinar X
 d. sinar inframerah
 e. sinar gamma
34. Salah satu manfaat gelombang radar adalah.....
 a. membunuh sel-sel kanker
 b. memotret susunan tulang dalam tubuh
 c. menghitamkan pelat foto
 d. pemotretan permukaan bumi dengan satelit
 e. mengukur kedalaman laut
35. Seseorang mengukur kedalaman laut dengan menggunakan pesawat radar dan mengirimkan pulsa gelombang ke dasar laut. 3 sekon kemudian pantulan diterima kembali. Jika cepat rambat gelombang dalam air 1500 m/s maka kedalaman laut adalah.....m
 a. 500
 b. 1500
 c. 2000
 d. 2250
 e. 4500

II. Jawablah pertanyaan –pertanyaan di bawah ini dengan benar !

36. Sebuah lup memiliki kekuatan 20 dioptri digunakan oleh seseorang yang bermata normal. Tentukan perbesaran anguler lup untuk mata berakomodasi maksimum dan tanpa berakomodasi !
37. 200 gram es yang bersuhu -10°C diberikan kalor sehingga seluruh es mencair menjadi air dengan suhu 100°C . Tentukan besarnya kalor yang diberikan pada es tersebut ! (kalor jenis es = $0,5 \text{ kal/gr}^{\circ}\text{C}$, kalor lebur es = $80 \text{ kal/gr}^{\circ}\text{C}$, kalor jenis air = $1 \text{ kal/gr}^{\circ}\text{C}$)
- 38.
-
- Hitunglah kuat arus yang mengalir pada rangkaian diatas !
39. Sebuah rumah menggunakan listrik sebanyak 1500 watt selama 30 hari. Jika pemakaian harianya rata-rata 8 jam dan biaya rekening listrik Rp 200,- per kWh, berapa biaya listrik rumah tersebut ?
40. Sebutkan sifat – sifat gelombang elektromagnetik !

KUNCI JAWABAN SOAL UUKK FISIKA KLS X
TAHUN PEL AJARAN 2011/2012

B. ESAY

36. Diketahui : $P = 20$ dioptri

Ditanya : $M = \dots\dots\dots$?

Jawab :

$$F = 1/p = 1/20 = 0,05 \text{ m} = 5 \text{ cm}$$

> Untuk mata berakomodasi maksimum :

$$M = (S_n/f) + 1$$

$$= (25/5) + 1$$

$$= 6 \text{ kali}$$

> Untuk mata tanpa berakomodasi

$$M = S_n/f$$

$$= 25/5$$

$$= 5 \text{ kali}$$

37. Diketahui : $C_{es} = 0,5 \text{ kal/gr}^{\circ}\text{C}$

$$L_{es} = 80 \text{ kal/gr}^{\circ}\text{C}$$

$$C_{air} = 1 \text{ kal/gr}^{\circ}\text{C}$$

$$T_{es} = -10^{\circ}\text{C}$$

$$M_{es} = 200 \text{ gr}$$

$$T_{air} = 100^{\circ}\text{C}$$

Ditanya : $Q_{total} = \dots\dots\dots$?

Jawab :

$$Q_{tot} = Q_1 + Q_2 + Q_3$$

$$= m \cdot C_{es} \cdot \Delta t_{es} + m \cdot L + m \cdot C_{air} \cdot \Delta t_{air}$$

$$= 200 \cdot 0,5 \cdot 10 + 200 \cdot 80 + 200 \cdot 1 \cdot 100$$

$$= 1000 + 16000 + 20000$$

$$= 37000 \text{ kalori} = 37 \text{ kkal}$$

38. $-\epsilon_1 + I \cdot \Sigma R + \epsilon_2 = 0$

$$-20 + I(1+5+2+R_p) + 8 = 0$$

$$-20 + I(1+5+2+4) + 8 = 0$$

$$12I = 12$$

$$I = 1 \text{ A}$$

39. Diketahui :

$$P = 1500 \text{ watt}$$

$$t = 8 \text{ jam/hari} = 8 \cdot 30 = 240 \text{ jam / bulan}$$

$$\text{Biaya} = \text{Rp } 200,- / \text{kWh}$$

Ditanya : biaya/bulan

Jawab :

$$W = P \cdot t = 1500 \times 240 = 360.000 \text{ Wh} = 360 \text{ kWh}$$

$$\text{Biaya} = \text{Rp } 200,- \times 360 = \text{Rp } 72.000,-$$

40. Sifat-sifat gelombang elektromagnetik :

- dapat merambat dalam ruang hampa
- merupakan gelombang transversal
- merambat dalam arah lurus
- dapat mengalami pembiasan (refraksi)
- dapat mengalami pembiasan (refraksi)
- dapat mengalami pemantulan (refleksi)
- dapat mengalami perpaduan (interferensi)
- dapat mengalami pelenturan (difraksi)
- dapat mengalami pengkutuban (polarisasi)

| Mean test score | 21.15 |
| Standard deviation | 5.10 |
| Internal Consistency | .73 |

The individual item statistics are calculated using all available data.

The overall mean, standard deviation and internal consistency indices assume that missing responses are incorrect. They should only be considered useful when there is a limited amount of missing data.
